

IMAGEWALL | GUIDE DIRECTION CHANGES

DIRECTION CHANGES

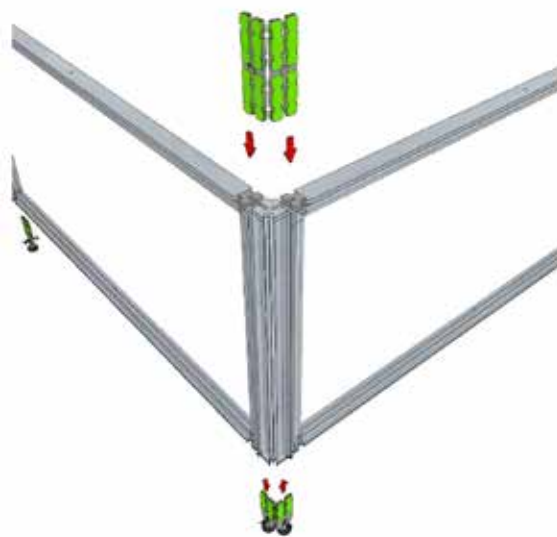

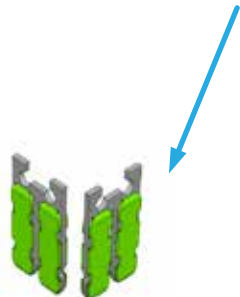

ImageWall Direction Changes allow you to link multiple flat walls together, forming L-shaped, U-shaped, or fully enclosed displays. Using corner extrusions, 3-way (T-section) uprights, and 4-way uprights, these connectors attach easily with the standard ImageWall push-fit system, giving you flexibility to create larger, multi-directional installations for exhibitions, events, or corporate spaces.
